Construction Industry

Construction Industry

Hungarians are proud of their creativity. They are happy to talk at length about the range of innovations associated with Hungarian scientists and inventors. The same applies to the results achieved by the construction industry. Hungarian specialist, Béla Gerster, is renowned for his role in constructing the Corinth Canal, which was completed in 1893 and was the longest of any such structure at the time. Translucent concrete and glass concrete have gained extensive international recognition among modern-day innovations from the construction industry, yet reusable plastic shuttering is also a Hungarian invention.

The Hungarian construction industry employed more than 200.000 people and created more than 21 million USD

value in 2024. The construction industry still plays a solid role in the Hungarian export, with an increasing number of Hungarian companies gaining popularity mainly in neighbouring countries. Several of these companies have acquired factories or real estate development companies (mainly in Poland), constructed apartment complexes, shopping centres, designed and built industrial and other special facilities, as well as water treatment systems.

The local sector's strengths are the design, construction, development of network infrastructures and recycling of construction waste. Several historic and listed buildings in Hungary and abroad demonstrate the sector's contribution to enriching the world's architectural

INCREASE IN THE PRODUCTION OF CONSTRUCTION IN THE CEE REGION 2019 - 2023 (%)

heritage. Hungarian construction and civil engineering firms enjoy extensive international recognition, undertaking many outstanding quality projects from Germany to the Far East. Hungary has a long-standing tradition in manufacturing construction products (e.g. wood products by Falco, plastic products by Graboplast, tiles by Zalakerámia). Companies specialising in roofing and interior design have a considerable, decades-long reputation and complete large volumes of international orders. To fulfil the high-level expectations of the sector, the Hungarian companies launched several innovation projects related to energy efficiency and alternative energy production which resulted in new insulation materials (e.g. glass foam and heated glass structures).

As Hungary is rich in thermal water resources, it has several companies that specialise in high-quality sanitary appliances that can later be used in the spa industry. The construction industry accounted for 6,1% of Hungary's total GDP in 2024. The Hungarian construction industry excels in quantity and quality, with an increasing number of Hungarian architectural plans and solutions gaining increased recognition in international competitions and exhibitions over the past few years. Europe's most extensive cultural and urban development programme is the Liget Budapest Project, including the House of Hungarian Music, which received international recognition and several prestigious awards. The Laposa Winery as well as the new passenger hall at Budapest Airport (SkyCourt) are also internationally recognised, as well as the Groupama Arena, which was named 'The World's Best Newly-Built Stadium'. An increasing number of international exhibitions and conferences (e.g. the International Conference on Sustainability in Energy and Buildings) choose Hungary as the location for their events, underlining the country's importance and key role in sharing professional knowledge on an international level. Using their significant R&D as well as professional training background, the Hungarian construction companies offer innovative and future-oriented in-house solutions that provide answers to the century's infrastructure and urban development sector's emerging technical, environmental and social challenges (e.g. smart

mobility systems for public transport, intelligent parking systems - 'Cityzen', reusable plastic shutters). As a result of the construction industry's outstanding development, over the past few years, Hungarian companies have been offering sustainable, modern, complex and - concurrently - sustainable systems. They have therefore also met their foreign partners' strict requirements in terms of environmental protection by using environmentally friendly or smart building materials, as well as implementing thermal insulation solutions.

Unfortunately, as in whole Europe the construction industry has been performing under pressure for the last 2 years by the inflation, the rising costs, strengthening green regulations and declining demand. Both the private and public sectors remain reluctant to spend for and invest in construction projects nowadays in most European countries. On the other hand the viable construction companies thus are forced to upgrade their flexibility and comprehensive competitiveness with the acceleration of their technological adaptation by facilitating new machineries and technologies (e.g. AI planning, 3D printing).

CSIKÓS TERV ARCHITECT LTD.

Csikós Terv Architect Ltd. offers comprehensive engineering solutions and development tracking from design sketches to the final products. Csikós Mihály, the founder and lead designer of the company, has almost 40 years' design experience and hundreds of projects completed in Hungary and many countries abroad. The company has created 3D visualisations and animations related to each project over the last 20 years. Csikós Terv Ltd. strives for high standards and top quality.

www.csikos.hu
info@csikos.hu
+36 20 923 09 38
H-2085 Pilisvörösvár, Zrínyi utca 23/A

PRODUCTS & SERVICES

Csikós Terv Ltd. provides comprehensive architectural services, ranging from sketches to complete plans. The company offers services in many different categories, such as houses, luxury homes, hotels, restaurants, shopping centres, public institutions or even ships.

The company focuses on premium quality services to fully meet client expectations; it always embraces challenges and often participates in unconventional projects.

ADVANTAGES

One of the company's most definitive advantages is its extensive experience in global projects (e.g. in Germany, France, Vietnam, Egypt and Saudi Arabia), with several returning customers. Another great advantage of the company is its experience in 3D visualisation.

REFERENCES

Hotel Four Points (by Sheraton): The company designed the interior of the Hotel Four Points by Sheraton in Kecskemét, Hungary's only Sheraton Hotel.

Shopping centres in Saudi Arabia: Following negotiations initiated at the Big 5 Saudi Exhibition, the company prepared the interior implementation plans and exterior design plans for four shopping centres in the Kingdom of Saudi Arabia.

Avalon Resort & Spa: The company prepared the designs and visualisations for one of the most popular resorts in Miskolctapolca, Hungary, which is located in the forest and offers outstanding recreational facilities.

KÖZTI CPLC.

KÖZTI Architects & Engineers, the architectural business with the longest traditions in Hungary, was founded in 1949. Since then, more than three thousand people have worked for the company.

The company operates five large architect studios supported by specialist studios, with structural, electrical, building and engineering departments.

www.kozti.hu
kozti@kozti.hu
+36 1 4872 600
H-1023 Budapest, Lublói utca 2.

PRODUCTS & SERVICES

The company provides architectural and engineering services for the complex design of public buildings (hospitals, hotels, theatres, sports halls, stadiums, reconstructions, office buildings, airports, schools, universities, shopping centres), residential buildings and industrial buildings, from the concept design to the construction drawings.

ADVANTAGES

The success of KÖZTI cPLC lies in the expertise and dedication of its employees, among them internationally recognised experts with decades of experience and ambitious young architects. The company ensures that the customers' visions are realised in a professional, energy-efficient and economical way by using the most innovative architectural solutions of the 21st century.

POKA3D LTD.

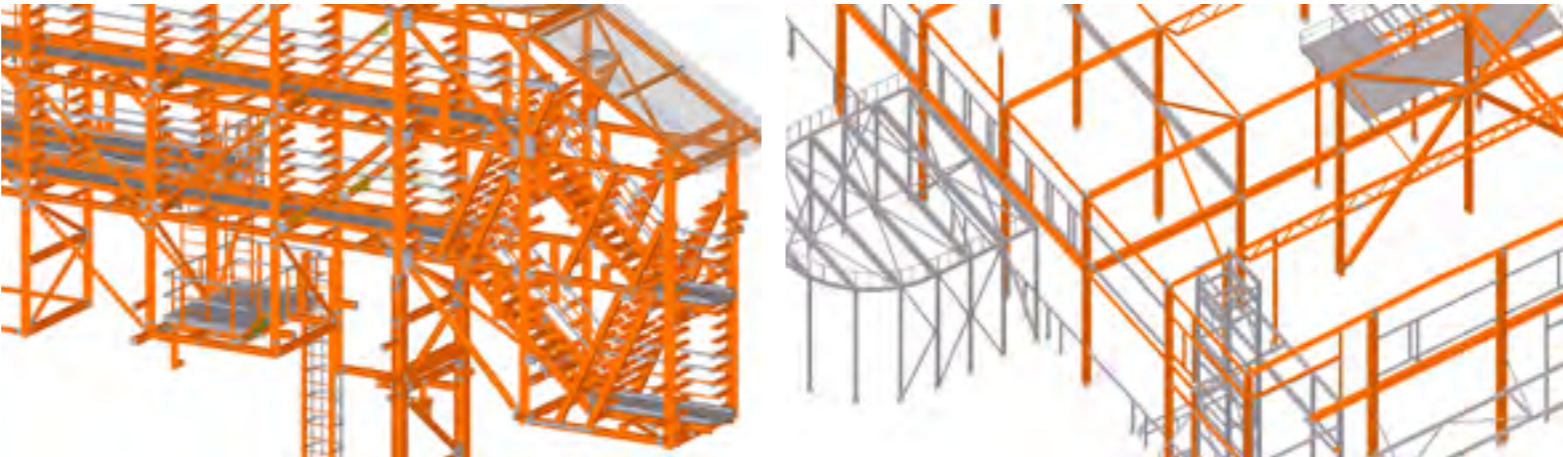

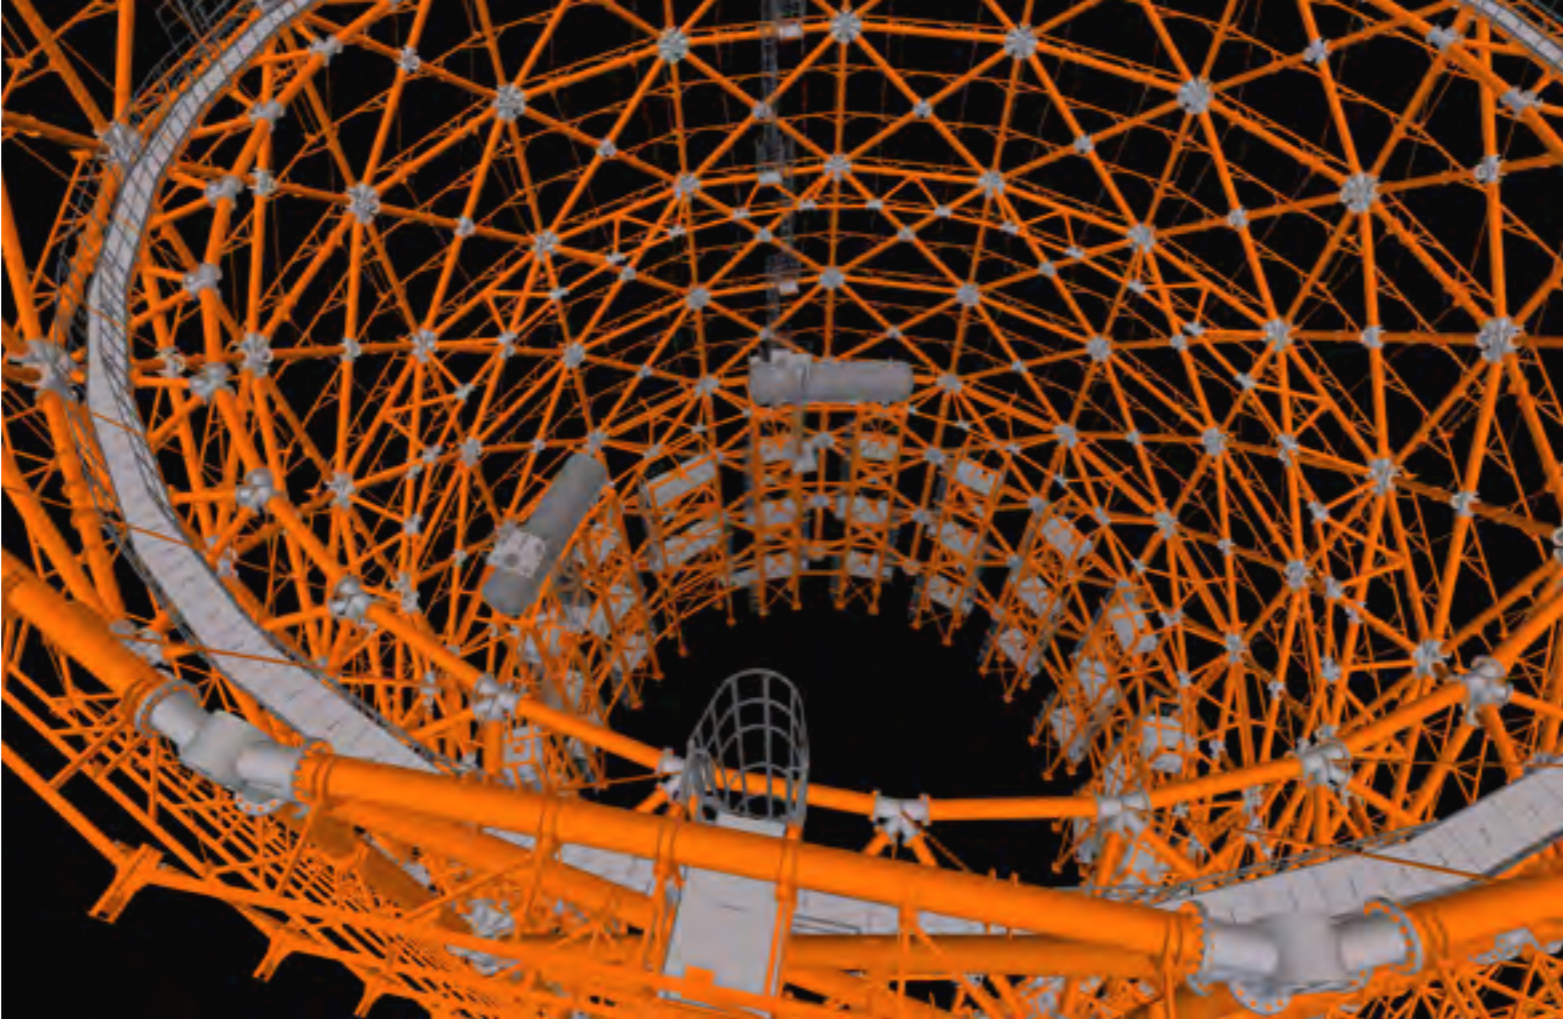

POKA3D is a Hungarian civil engineering company providing specialised engineering services for structural steel and RC projects in the areas of Industrial and Commercial Projects, Power Plants, Oil and Gas, Offshore and Transportation. In two decades of providing engineering services - founded in 1998 by Gabor Poka - Poka3D has completed more than 4,000 projects in over 35 countries. Its projects vary in scope and industry, demonstrating its steel and RC calculation and design, site engineering, mechanical engineering and power plant engineering skills. Poka3D is certified under ISO 9001 Quality Management System standards.

www.poka3d.com
poka@poka3d.com
+36 30 200 2245
H-1211 Budapest, Varrógépgyár utca 8-10.

PRODUCTS & SERVICES

Poka3D has designed significant projects in almost every area of engineering, from power plants and high-voltage towers to lattice steel bridges, dams and roller coaster equipment.

Poka3D provides engineering services in the fields of industrial, offshore, oil and gas and commercial engineering, including structural calculation, structural steel and joint calculation, structural detailing and design, 3D modelling of steel structures using TEKLA, strength analysis, reinforced concrete design and detail (in-situ and pre-cast) as well as mechanical engineering.

ADVANTAGES

In several countries, the proficiency and extensive experience of its engineers allow Poka3D to execute any civil engineering project of any size, from calculations to details. The scope of services will be adapted to the given project's specific needs.

Its engineers are known for their creative problem-solving skills and overcoming professional challenges in various industrial sectors.

Poka3D has thorough knowledge and numerous licences for various software, e.g. Tekla Structures, AutoCAD, Axis, Staad-Pro, Dlubal, Robot, IDEA, Solid Edge and Inventor.

SINGER DESIGN LTD.

Singer Design’s core team consists of architects and designers. Its common ambition - ‘creating charisma by design’ - results from more than a decade’s mutual self-inspiration and a design philosophy tested by observations and experiences. It is the company’s way of thinking and its unique workflow that shapes the way the core team interacts and leads every project. Singer Design Ltd. progressively extends its team to participate in international projects. Therefore, the company works in partnerships to provide professionalism, trustworthy consultancy, local experience and capacities.

www.singerdesign.eu
adam@singerdesign.eu
+36 70 945 7594
H-1137 Budapest, Radnóti Miklós utca 2., 5. emelet

PRODUCTS & SERVICES

Development consulting includes conceptual, operational and feasibility consulting and advice.

Value mapping swot research and analysis of the human-, environmental/process, and market features of the location

Design briefing consists of proposing a project theme (purpose), exploitable theme-communicating services and overall design specifications.

Overall service and brand design involves naming, brand identity, staff uniform, F&B experience, equipment and accessory design, as well as sound and scent concept and artwork curation, among others.

Architectural full service comprises master planning, landscape, architectural, interior and furniture design, as well as general engineering.

Operational experience design covers workflow specifications.

Construction site and operational supervision includes control of design criteria.

SINGER DESIGN.

ADVANTAGES

Singer Design has built its design strategy method on the need for successful developments: to create superior development profitability via sentimental decision-making and loyalty on behalf of the customer.

Local SWOT-based identity creation responds to problems and enhances the site’s strength in overcoming any competition by shaping the services and design of the property development.

TIBA ARCHITECTS STUDIO LTD.

TIBA Architects Studio - established in 2005 - provides comprehensive architectural and engineering services. Aside from grand design ambitions, a professional management structure supports the business strategy in each of its projects. Creative and dynamic professionals with international professional experience bring success to projects ranging in scale and function.

Outside of Hungary, the company has designed and completed projects in several European countries, including the UK, the Netherlands, Germany, the Czech Republic and Cyprus. In addition to a sensitive response to design challenges, TIBA's strength lies in its professional approach, constructive problem-solving ability and personalised services.

CÉH INC.

CÉH is one of the leading Hungarian engineering businesses in building and bridge design, with more than 30 years' experience. The company offers design and engineering services, project management and consultation. As outstanding engineering experts on the Hungarian design, building & development market, it strives to increase its international presence by establishing partnerships. With its engineering and development expertise, 'CÉH brings value and system to the world to build the future'.

www.ceh.hu

+36 30 973 88 68 / +36 20 3877333
H-1112 Budapest, Dió utca 3-5.

PRODUCTS & SERVICES

Its Building Design department undertakes full-scale, architectural, structural, HVAC and electrical design assignments.

End-to-end project management services are offered by consultants or in a package paired with a wide range of design and engineering services. Furthermore, the company offers clients outstanding professional knowledge and experience through its engineers, as well as state-of-the-art software, to provide excellent designs for new bridges or bridge reconstructions.

CÉH has completed multiple 3D-laser scanning surveys and modelling projects, including the scanning and modelling of the Hungarian State Opera House.

ADVANTAGES

For bridge design, CÉH acts as a general designer responsible for all engineering disciplines. It provides complex engineering solutions in building design with the aforementioned disciplines in-house (architectural, structural, mechanical and electrical design) and collaborates with long-term partners to deliver secondary and auxiliary services.

For the company's development projects, it strives to recognise and understand its clients' business angles and goals, allowing CÉH to utilise its wealth of economic, business and legal knowledge.

PRODUCTS & SERVICES

KÉSZ's Engineering & Technologies Division includes the group's major engineering activities, from designing and executing buildings to manufacturing steel structures, vessels and reinforced concrete structures.

The company's diversity is proven not only by the broad range of references but also by its innovative solutions and continuous renewal capability.

ADVANTAGES

Thanks to its vast portfolio of services and resources, KÉSZ can effectively respond to the sector's emerging construction and economic needs, not only in Hungary but also in international markets.

All related tasks are carried out by the group's members, from design, implementation to operation.

KÉSZ's key advantage is its knowledge and its consistently delivered can-do attitude.

LES ILDZSAS CPLC.

As a Hungarian, family-owned company, Les Ildzsas's key target is to provide its customers with first-class construction work on time and with maximum flexibility.

The company's core business is the construction of industrial buildings (halls, warehouses, factories, offices) in general construction, be it a greenfield investment, a renovation or an expansion project. Les Ildzsas works with its team of professionals on projects worldwide. Its management checks the condition of the work processes on-site daily; this is the guarantee for well-planned, thorough, quality work executed on time.

www.lesildzsas.hu
info@lesildzsas.hu
+36 30 942 5581
H-2120 Dunakeszi, Fóti út 45.

PRODUCTS & SERVICES

The company's activity covers the full implementation of industrial, commercial and residential projects, which could either be a complete renovation or a greenfield investment.

The company's services cover the renovation of buildings, from structural construction to professional work, to internal construction work, performing mechanical and electrical installation work. Les Ildzsas can also undertake the construction of external utilities, roads, as well as environmental and landscaping works.

ADVANTAGES

With its 30 years of experience in the construction business, Les Ildzsas's primary consideration is to provide its customers with first-class construction work with maximum flexibility yet strict compliance with deadlines. The company works with its highly qualified team of professionals on its projects throughout the country. Its management checks the condition of the work processes on-site on a daily basis, thus guaranteeing the well-planned, timely implementation and the quality undertaken.

V-HÍD PLC.

As a part of Mészáros Group, V-Hid is a leading player of the Hungarian railway construction industry. Our group can provide for the design of offices, railway construction, railway signalling, overhead catenary building and bridge construction works.

We are a relatively young but extremely dynamically developing group of companies. We can provide our customers with comprehensive services in railway construction not only in Hungary but also abroad from designing through construction to maintenance.

<https://vhid.hu/>
sajto@vhid.hu
+36 20 478 9606
H-1146 Budapest, Hermina út 17.

PRODUCTS & SERVICES

Our mission is the modernization of the railway infrastructure. We are in possession of an SMD-80, one of Europe's three, state of the art continuous track laying, renewal and removal assembly lines. We have engines, rolling stocks and rail welding capacities.

Our constantly expanding equipment enables modern and really fast, accurate preparation and implementation.

Our satisfied customers prove the high quality of our services throughout the European Union and even beyond.

ADVANTAGES

Due to the high number of orders, we have nearly 1,000 employees and the further growth is continuous. Our work is particularly unique, which is why we are trying to employ the best possible specialists at our company in addition to using modern machines.

Besides the current procurement problems and ever-increasing prices, we are striving for a continuous supply of materials, which we have made even more stable by establishing our own railway transport company.

REFERENCES

V-Híd Zrt. has completed the implementation of Phase I of the Debrecen–Füzesabony railway line modernisation project and the Velké Březno – Ústí nad Labem railway construction with the SMD 80. The Budapest-Belgrade railway modernization is currently in progress.

WEINBERG 93 ÉPÍTŐ LTD.

Weinberg 93 Építő Ltd. is one of Hungary's leading innovative, structural steel manufacturing, installation and general contracting companies. Its market share has been growing steadily for 25 years, and the volume and complexity of the company's construction activities are also increasing year on year. Weinberg's main activity is the general construction and fabrication of steel structures. The company pays special attention to exploring the needs of its partners, providing a tailor-made service and offering cost-effective solutions, from the design stage to the end of the warranty period.

www.weinberg.hu
tornallyay.zoltan@weinberg.hu
+36 30 982 1152
H-3950 Sárospatak, Malomkőgyár utca 7.

The company's 12,500 m² structural steel fabrication plant is equipped with state-of-the-art automated production lines, drilling and cutting machines, high-performance welding stations and surface treatment facilities. Its steel fabrication production capacity is up to 8,000 tons/year and Weinberg also has a 400 m² thin sheet bending plant. The company's 3,000 m² painting area is equipped with a 5-floor extraction system with active filtering modes for solvents, water-based paint systems and fire retardant coatings.

Laser cutting: Weinberg uses a Mazak Fabri Gear 400 III laser cutting machine, which not only cuts the profiles but also prepares the component joints for welding. It can cut pipes up to 410 mm in diameter, sections up to 300x300 mm in overall size, H beams, I beams, L sections, rolled or specially bent profiles with a 3D tilting laser cutting head.

Machining: The company uses a Skoda FCW150 CNC controlled horizontal boring and milling machine, equipped with a stock of 60 tools. The maximum load capacity of the rotating bench is 25,000 kg, which also has a X, Y, Z, W axis direct measuring system. Working range: 13,000 mm x 3,000 mm x 1,900 mm.

PRODUCTS & SERVICES

As a general contractor, Weinberg undertakes the overall construction of steel, reinforced concrete buildings and halls, from their design through to turnkey delivery. The company's own construction equipment, permanent base of subcontractors and experienced construction managers on-site contribute to the smooth execution of the projects.

ADVANTAGES

Weinberg offers constructive cooperation to its customers right from the design phase. With its professional experience, the company supports and helps to realise their ideas. It provides a financial and professional guarantee for its work, from the design to the end of the warranty period. The facilities built by the company are cost-effective and economically sustainable. The outstanding quality of the steel structures Weinberg fabricates is justified by the high number of international - incl. overseas - orders. The company's references include stadiums, industrial facilities, office buildings, commercial projects and power plants. Weinberg has worked in Germany, Switzerland, Norway, Austria, the Benelux and the Czech Republic, among others. In addition to its horizontal and vertical drilling and milling machines, a MAZAK 3D laser work centre ensures the precise machining of large, individual parts.

FALCO CPLC.

Since the company’s founding in 1939, FALCO has continued to grow, invest and develop its own activities in the wood industry. One of the key moments in FALCO’s development was joining Kronospan in 2007: the company not only invested in FALCO, but also brought expertise and state of the art technology, modern organisation, new markets and an entirely new approach to the business. With a passion for wood, FALCO’s team consistently brings forth innovative ideas for new products. The company’s management is proud of its well-known principle: ‘innovation is our tradition’.

www.falco-woodindustry.com
office@falco-woodindustry.com
+36 94 516 600
H-9700 Szombathely, Zanati út 26.

PRODUCTS & SERVICES

FALCO offers a wide range of options of innovate solutions when it comes to wood-based panels. Its product range includes a variety of particleboards, fibreboards, mirror and acrylic gloss boards, HDF boards, worktops, laminates, compact boards for interiors and exteriors, BETONYP® chipboard, OSB boards and other accessories.

The company’s service portfolio includes the reliable LOVE EXPRESS stock programme, marketing tools for promotion, technical support, providing end users with insight into production and technology and optimised transportation to customer sites.

ADVANTAGES

FALCO’s biggest advantage is the Kronospan background. Kronospan has specific key competitive advantages, such as market coverage with a dual-brand strategy, asset quality and vertical integration, a competitive cost base and a highly educated team of experts. FALCO places special emphasis on matching high technical and environmental standards in compliance with local legislation. The company pays special attention to low emissions, state-of-the-art processes and filter technology and focuses strongly on achieving a sustainable and circular economy because environmental responsibility plays a pivotal role in its operations.

GEMTECH LTD.

GEMTECH Ltd. is a privately owned company in Hungary that has become one of the fastest developing and largest manufacturers of steel structures and machinery in the Central and Eastern European region in two decades' time. The structures manufactured by GEMTECH represent a particularly high and unique level of quality; the annual production capacity exceeds 10,000 tons, with machined individual parts weighing up to 100 tons.

With a constant number of dedicated employees and a few subcontractors, GEMTECH provides professional welding and structural fitting capacity. The production is managed by experienced engineers, paying particular attention to quality.

www.gemtech.hu
info@gemtech.hu
+36 94 516 600
H-4552 Napkor, Ipartelep út 1.

PRODUCTS & SERVICES

GEMTECH is specialized in producing high quality structures:

- structures under dynamic force and special machine components produced for the energy sector (e.g., cranes, lifting equipment, power plant equipment, generator and turbine components, base frames),
- building construction, steel buildings (e.g., industrial, agricultural, sports & leisure buildings),
- custom machined units (e.g., rolling mills equipment, excavators, scrap machines).

Our manufacturing process: Sandblasting, surface cleaning; Cutting; Locksmith services; Structural assembly; Welding; Machining; Surface treatment; Assembly and erection.

ADVANTAGES

The company has extensive experience in the production of unique and large-size products, specifically cranes and lifting equipment. In addition to professional, skilled workers, the quality of the machines and structures manufactured by the company is guaranteed by procedures and techniques representing the latest technological standards, including a modern, special surface treatment system, an in-house heat treatment furnace of extreme size and a self-developed welding supervision system with modern welding machines.

GRABOPLAST FLOOR COVERING MANUFACTURERS LTD.

In over 110 years of existence, Graboplast Floor Covering Manufacturers Ltd. has become a leading specialist floor manufacturing company. The Hungarian-owned group of companies has four factories in three locations across Győr, Kecskemét and Tatabánya, with more than 90% of its income coming from export markets.

Graboplast products are made with the most advanced technology and are exported by the company, employing nearly 650 staff in more than 100 countries across five continents.

www.graboplast.com
peter.herczig@graboplast.hu
+36 96 506 154
H-9023 Győr, Fehérvári út 16/B

PRODUCTS & SERVICES

The Graboplast range of products has significantly changed over the last decade. The company concentrates on special flooring with great benefits developed in-house, such as commercial, show, sports and transport flooring and the manufacturing of residential flooring.

The company's latest developments are LVT, SPC and homogeneous sheet vinyl within its wide selection of indoor vinyl and parquet floors.

ADVANTAGES

If there is one key to a more-than-110-year-old company, then it is adaptability, innovation and continuous work. Graboplast's experienced R&D team continually develops new products and innovative technical solutions. Its patented manufacturing processes allow Graboplast to create unique product features. Among the vinyl flooring manufacturers, the company was the first to switch to fully phthalate-free technology. Its floorings are 100% recyclable, and Graboplast can convert them into valuable raw materials incorporated into its flooring production.

JÁSZ-PLASZTIK LTD.

The family-owned company established its reputation with plastic processing, but it also supplies multinational companies. The headquarters of the company is in Jászberény (Hungary), but it also has sites in Nyíregyháza, Nagyréde, Süllysáp, Jászapáti and in Slovakia as well (Slovakia, Nitra).

The corporate strategy focuses on sustainability, quality and productivity. Our company is committed to protecting the environment, acting responsibly for the society, the economy and its colleagues.

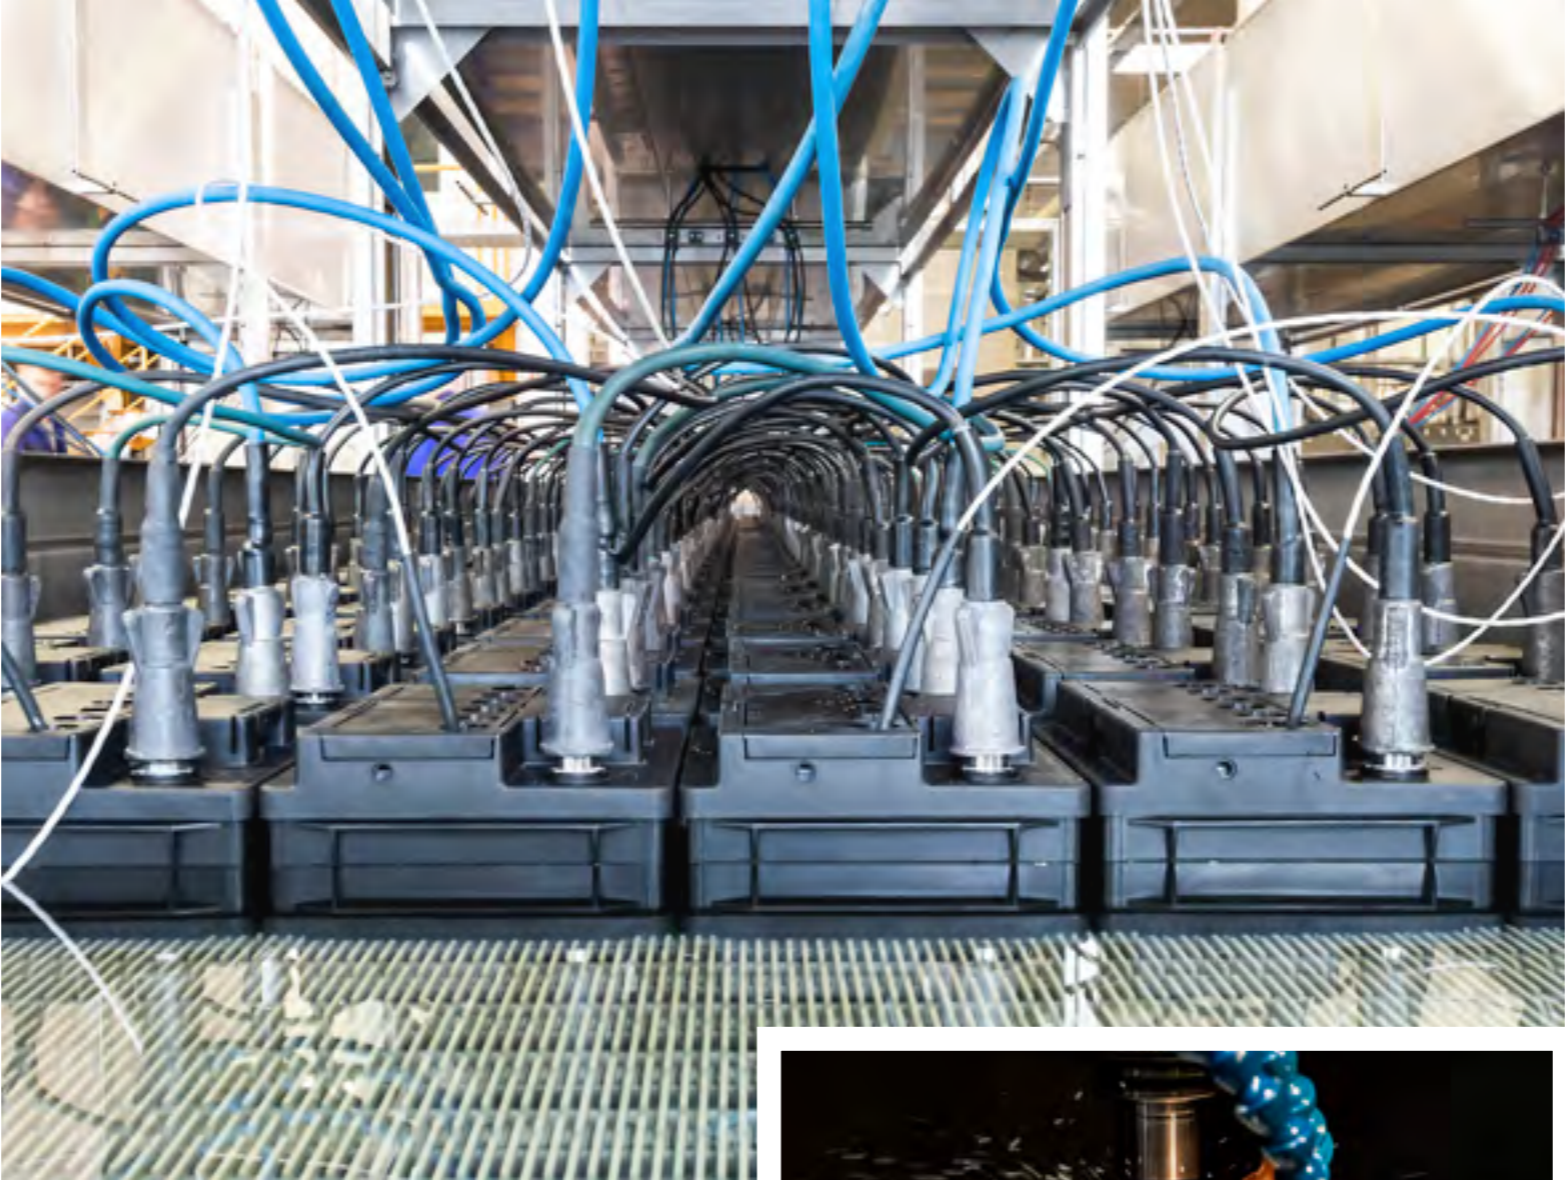

www.jp.hu
jasz-plasztik@jp.hu
+ 36 57 413 413
H-5100 Jászberény, Necső telep 1.

PRODUCTS & SERVICES

The company has over 300 injection moulding machines. The injected, painted, tampoo printed, hot stamped parts produced are assembled with purchased components.

The company's equipment includes 22 Erlenbach shape moulding machines, 2 blockmoulding machines and cutting lines. The annual capacity from traction batteries amounts to 320,000 pcs and 1,300,000 pcs from starter types.

Food approved packaging material for dairy products, in relation to this, the aluminium closing foil is also cut to the correct size and printed.

The extrusion lines are capable of processing various types of raw materials: PP, PC, PS, PMMA, PET, LDPE and HDPE. The company produces indoor and outdoor paints and plasters for the construction industry.

It also produces summer and winter windscreen washers, antifreeze liquids and concentrates.

ADVANTAGES

With more than 350 injection moulding machines, the firm is one of the marketleaders in Hungary. It offers the widest range of technologies.

At its 37,000 square meter production hall, after recycling used batteries, it produces new batteries. The company recycles lead acid battery and PET bottles as well as LDPE/HDPE foil. Its engineers design and produce moulds and equipments, and repair and maintain them as well.

The company name can be encountered on the roads of Europe on 50 trucks available for domestic transportation and 50 other vehicles for international transportation. Their guiding principle is that the generations to come are highly dependant on how we can treat and recycle the waste generated by consumer society.

MIXTURA LTD.

Mixtura Ltd., which produces and trades building materials, is located in the northern industrial zone of Veszprém, Hungary. The private business has been successful on the market for more than 25 years as a producer of building materials and a professional representative of technical products. Constant research, development activities and innovative potential ensure Mixtura’s products’ continuous renewal.

The company's competitiveness and steady market position help Mixtura establish an excellent QPR in its services. The main principle in its operation is order and thoroughness, which, paired with an appropriate professional technological and technical background, results in the company’s stable growth. Mixtura always listens to its partners’ unique needs, and thanks to its flexibility, strives to satisfy individual customer needs.

PRODUCTS & SERVICES

Mixtura Ltd.’s product line includes facade and plinth plasters; primers; exterior and interior wall paints; insulation systems; industrial floor coverings; innovative, previous roads and pavements; as well as special additives, such as UV protector or HC products.

ADVANTAGES

Owing to continuous innovation and development, the company offers its customers 100% waterproof, environmentally friendly, long-lasting pavements. Mixtura's solutions provide a unique and exclusive look both indoors and outdoors. They offer an excellent solution in the fields of park construction, landscape architecture, tree trunk framing, car parks and community spaces.

One of the company’s greatest strengths is the Mixton pavement, which is a resin-based, stabilised gravel pavement with water and air permeability.

The other being the Stabilizer®, which is an organic powder-based, crushed gravel pavement that can be used without any restrictions in landscape and water conservation areas.

AGM BETON CPLC.

AGM Beton cPLC was founded in 1997. The company produces reinforced concrete pipes on its production site. It performs significant construction activities, using its pipes and other precast, reinforced concrete products in both civil and structural engineering. Thanks to its very high innovation potential, it is the manufacturer of reinforced concrete products of Europe's highest available quality; its reinforced concrete products have been sold in four European countries and another five countries overseas.

www.agmbeton.hu
info@agmbeton.hu
+36 29 610 460
H-2200 Monor, Külterület 0100/8. hrsz.

PRODUCTS & SERVICES

ROCLA pipes are ideal for construction because of the low pressure and gravity sewers, road and railway water culverts, vertical shafts, wastewater and rainwater pump shafts, shut-off shafts, oil and grease traps and wells. The uniquely designed, reinforced concrete products meet all special requirements.

The products are suitable for the construction of water towers from 100-1,000 m3, telecommunication transmission towers, large shafts made of segments with an inner diameter of 4.64 m, panel lines for hall roofing, water reservoirs up to 1,000 m3 and wastewater pump stations.

ADVANTAGES

Rocla technology: a combination of spinning and rolling procedures (in short) resulting in high quality, wear-resistant pipes with a smooth inner surface, where no further processing is required. The technology guarantees complete water tightness.

Water and telecommunication transmission towers: by using precast structures, this results in an increased lifetime, shorter installation time and cost-efficient use. No scaffolding is required.

AGM possesses several patents that can be used in both the civil engineering and structural construction fields.

H-1138 Budapest, Váci út 182.

PRODUCTS & SERVICES

Budapest Waterworks designs - and partially implements - its investments by using the company's own capacities and involving subcontractors, while also participating in increasing numbers of foreign assignments around the world. The company also has construction experience in water infrastructure developments. Its mobile water purification systems are used both in the long and short term.

On the consultancy side, Budapest Waterworks is ready to share its experience with water utility companies or operators via various operations and processes, programmes (FOPIPs), in developing mid- or long-term investment plans for service areas.

ADVANTAGES

Budapest Waterworks has extensive experience in 24/7 drinking water supply and wastewater services, enabling the company to bring the 'operator's aspect' to its projects. The company has more than 150 years' consolidated knowledge. As the company is not committed to any supplier or producer, it is able to recommend the most suitable solution with no hidden constraints. Budapest Waterworks believes in tailored solutions, and therefore always provides its clients with a solution that best fits their unique conditions.

B+N Referencia Zrt. is the market leader FM service provider in Central and Southeastern Europe. Over the last two years the company has purchased five FM companies and is now present in Poland, Romania, Czech Republic, Slovakia, Slovenia and Bulgaria. The company employs 21,000 people and covers over 16 million square metres area. Its customers include major operators in the corporate and business sectors, as well as public institutions. B+N Referencia Zrt. establishes new trends in the industry and is the only facility management company with a dedicated research and development department. The company aims to renew the FM industry with its innovative methods. The company is proud of its own development known as "ROBIN" the autonomous industrial cleaning robot, designed for the efficient cleaning of large contiguous areas. It is also proud of a self-developed mobile UVC disinfection device that takes UV disinfection of vehicles to a higher level. B+N Referencia Zrt. is also engaged in extensive activities in bioinformatics. Its aim is to soon implement a metagenomics analysis and prediction system. This revolutionary innovation allows for the rapid detection

of infectious colonies spreading in public places to prevent possible epidemics. This unique development will drastically reduce the risk of infection in hospitals, increase patient safety and protect the health and safety of people in the workplace.

The company aims to establish a more liveable world and a healthier environment via its complex services and innovative, in-house developed devices. B+N Referencia Zrt. considers its social mission to increase the social appreciation of cleaning work. After all, it is not only the cleanliness that we should cherish but also the work of the person responsible for it.

MÜSZER AUTOMATIKA LTD.

Műszer Automatika Ltd. is a family-owned company established in 1982 with the aim to providing innovative solutions in various fields of safety engineering. As a result of continuous innovation and development, the company has become a market leader in various business fields.

The company's main activities include the development, production and servicing of railway signalling and safety devices, traffic automation equipment, public and industrial gas and solvent vapour detector systems. The latest project of the company is an innovative heat protection technology in the form of the MANTI® CERAMIC.

www.muszerautomatika.hu / www.manti.hu
mautom@muszerautomatika.hu
+36 23 365 280
H-2040 Budaörs, Komáromi utca 22.

PRODUCTS & SERVICES

- Heat protection coatings (reflective insulation)
- Railway safety equipment
- Gas and solvent vapor detectors

ADVANTAGES

Over the past 40 years more than 3,000 barrier drive systems have been installed, and most of them still being used today. Our level crossing protection systems have been developed and are manufactured in accordance with European safety standards such as EN 50126 with safety integrity level SIL4. Other railway products of our company include LED signals, railroad switch drives and heating solutions.

Our gas and solvent vapour detector systems can detect more than 100 types of gases/solvents to protect the

personnel from hazardous substrates. Many of our equipment are ATEX certified and are available for use in explosive atmospheres.

Our portfolio's most recent product – MANTI® CERAMIC – is a state-of-the-art thin layer coating suitable for use against solar irradiation on various architectural and technological surfaces, consequently providing efficient heat protection. Owing to its extraordinary reflectance, this product can alleviate summer-time energy expenditure used for cooling and thereby reduce the ecological footprint, especially in hot and sunny climates. The product is water-based and its manufacturing process is environmentally-friendly. Our current production infrastructure can produce more than 2 million litres of MANTI® CERAMIC annually.

Environment Industry

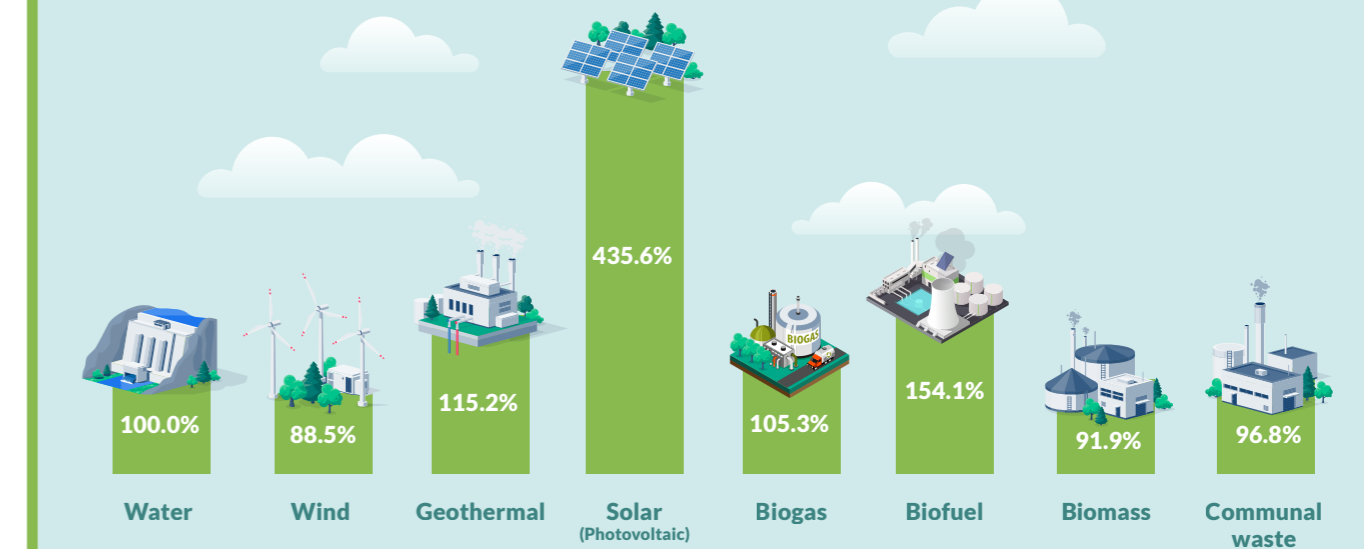

Environment Industry

One of Hungary's most important natural resources is water. Hungary is one of the richest countries in Europe in both surface freshwater and in geothermal waters below the surface. Consequently, Hungary has a decisive centuries long history in water management. For instance, the regulations of our rivers in the 19th century were the largest such project in Europe. Furthermore, in the twentieth century Hungary were able to develop its water management industry to a world-class level while we use our geothermal potentials considerably. As a result, we have a whole network of thermal baths and spas through out our country. Nevertheless, nature conservation is of utmost importance as well. As such, Hungary has ten national parks and within the framework of the European Union's Natura 2000 nature protection programme we have a wild-spread area of further special nature reservation areas too.

As preserving nature is in focal point of Hungary within the environmental industry, another prominent area is renewable and environmentally friendly energy production. Over the last decade, Hungary has dedicated significant resources to developing the renewable energy sector. The greatest developments were implemented in the biomass and solar-based energy production sectors, so there are now several companies using the most up-to-date technologies. Renewable energy sources provide 31,1% of Hungary's energy production; however, in some periods more than 25% of the energy production was provided by renewable energy sources. Several contemporary technological solutions have recently been implemented in other areas of the environmental industry,

CHANGE OF RENEWABLE ENERGY PRODUCTION 2019 - 2023 (%)

from wastewater treatment to waste recycling to the coverage of public utilities in the country's settlements. Hungarian companies, as a result of investments and developments, are able to offer their foreign partners sustainable, modern and complex systems that meet the highest environmental requirements. Outstanding areas of the environmental industry: recycling of construction waste, complex flood-protection systems, water and wastewater treatment, renewable energy production solutions for households and municipalities, geodesy, balneology research and well drilling, complex smart city solutions and natural disaster management expertise. The growing competitiveness and the international recognition of the Hungarian environmental industry and its solutions are demonstrated by prestigious international awards (e.g. the Ethnographic Museum). Hungary was able to organise several world-class international exhibitions and events (e.g. Budapest Water Summit), which also indicates that the country is on the road to becoming a focal point for the international environmental knowledge base network. These days, Hungarian companies are able to offer complex environmental solutions of their own,

which results in adjusting these technical-technological solutions to the environmental challenges of the 21st century, both in urban areas and in the countryside. Hungarian higher education, the postgraduate training programmes and the country's R&D activities in the field of environmental industry also contribute to the leading global position of Hungary. Due to logistical and historical reasons, the Balkans and Eastern European countries are still considered to be the primary export target markets for the Hungarian environmental industry. Recently, the geographical perspectives of the industry were broadened as the economically developing and moderately developed regions (e.g. Asia and Africa) also need efficient and unique environmental technologies and know-how. In these markets, however, lower wage levels and quality recruitment must be taken into account in addition to development opportunities. The companies should follow an integrated approach in these regions. Hungarian companies should therefore outsource labour-intensive activities to local entrepreneurs, where possible, while themselves simultaneously performing value-added activities requiring special expertise.

KEXPORT CLUSTER

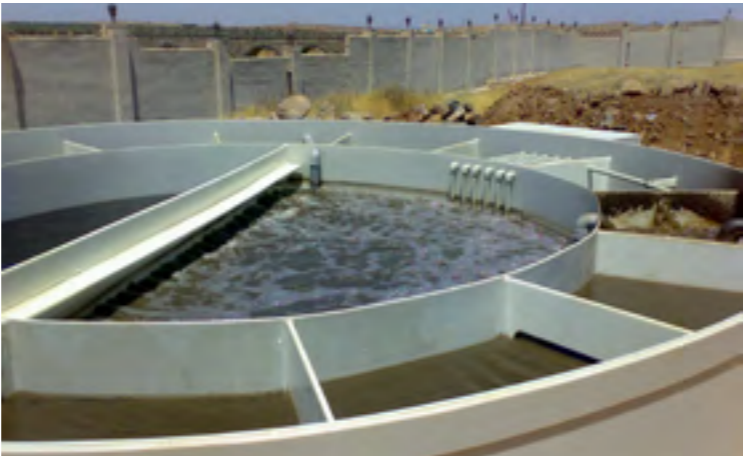

KEXPORT Cluster is a cooperation network involving Hungarian environmental enterprises, which aims to provide expertise, knowledge and technology via a wide range of environmental technologies and services in foreign markets.

Cluster’s strategic goal is to create new business opportunities by promoting intersectoral cooperation, exploring foreign cooperation opportunities and generating projects through joint product and service marketing and market research. Cluster members focus on introducing know-how, patents and industrial protection, own industrial property rights and implement several EU-funded RDI projects.

www.kexport.eu/en
info@kexport.eu
+36 1 350 7271
H-1024 Budapest, Keleti Károly utca 11/A I/4.

PRODUCTS & SERVICES

Cluster members offer accredited measuring, sampling (air, noise, soil, vibration, water, waste, wastewater), construction and renovation work at water utilities. Members also undertake microbiological water monitoring, environmental audits and impact assessments, industrial wastewater treatment, planning and manufacturing systems for material transport and processing. Cluster members’ service portfolios also include alternative fuel production and the preparation of biomass and pre-treated waste for energy recovery; pre-treatment and the recycling of paper, plastic, aluminium and electronic waste; remediation; NO DIG pipe renovation; waste management and water loss measurement of water networks.

ADVANTAGES

By intermediating the cluster members’ different competencies, and by covering the entire environmental sector, KEXPORT is able to offer solutions for complex challenges. Such a synergy with an extensive international network of businesses, governmental bodies and municipalities facilitates consortial partnerships in global tenders and joint participation at international forums and exhibitions with B2B events.

Envihorizont LLC. supports the technological optimisation of sewage plants, technological planning of environment and water quality protection facilities, technical consultation and on-site measuring for environmental monitoring. Envihorizont is active in the fields of climate and environmental protection as well as human healthcare. The company's integrated engineering is designed to support its activity linked to bioenergetics and highly specific biotechnology applications, to ensure sustainability, the profitability of activities and projects of integrated climate protection, bioenergetic, biotechnological and bioindustrial facilities.

www.envizont.eu
gemd@envizont.eu
+36 70 941 3143
H-7100 Szekszárd, Rizling utca 11.

PRODUCTS & SERVICES

Integrated RDI activity in the fields of climate, environmental and health protection, bioenergetics and biotechnologies.

Envihorizont's specific activities are design, skills and project coordination, overseeing photobioreactors and complexes, on-site measuring and testing, as well as technology control and optimisation.

Envihorizont's microalgae technology is ready to be challenged industrially and to prove that the company can provide turnkey, optimal solutions (including licensing and operation optimisation). Trainees have the opportunity to participate in Erasmus and Erasmus+ programmes. The company operates a testing laboratory equipped with fixed and mobile equipment.

ADVANTAGES

The developments represent the best available technologies in the field for engineering health, antiviral, climate and environmental protection adapted to actual and perspective challenges associated with health and economical rehabilitation following the COVID-19 pandemic. The technologies are highly efficient - economically and energetically - in conformity with circular economy and sustainability. The fully automated and remotely-controlled equipment require less space and achieve a higher productivity rate compared to traditional pieces. The zero carbon and trading efficiency, affordable bioenergy and biofuel production, low water and ecological footprint and perseverance with long-term strategies are all important aspects in Envihorizont's operation.

KIS ENGINEERING AND TRADING LTD.

KIS Engineering and Trading Ltd. was established in 1990 with six employees and, in the last 30 years, has grown to become an enterprise with more than 200 employees. Today, it provides comprehensive engineering packages, including design, feasibility studies, equipment manufacturing, erection, installation, commissioning, licensing, personnel training and maintenance.

As customer satisfaction is emphasised in the business policy, only high-quality work is acceptable. Since 1995, the company has held all the necessary certificates and qualifications, and has been running an ISO 9001 quality management system certified by TÜV Rheinland since 2003.

www.kiskft.hu
papp.andras@kiskft.hu
+36 30 311 6723
H-3792 Sajóbáony, Gyártelep

PRODUCTS & SERVICES

In the field of engineering and equipment, KIS Engineering and Trading Ltd.'s service portfolio ranges from static calculations and the production and assembly of various products, from electrical and instrumental construction to engineering, electrical and instrumental maintenance.

The company also manufactures equipment for the chemical, environmental and pharmaceutical industries, tailor-made equipment and structures, steel structures,

columns for the chemical industry and plastic equipment. KIS Engineering's portfolio also includes the design and licensing of stainless steel pressure containers (with a capacity of 50 and 216 litres and a maximum service pressure of 5 bars).

ADVANTAGES

With 30 years' experience in dynamic technological development, KIS Engineering and Trading Ltd. has experience in the operation of its technologies; the company is therefore aware of the day-to-day technological problems and provides strategic advice. It employs more than 25 engineers and work is executed by experienced employees, yet together with its subcontractors, the company can mobilise a workforce of approx. 400 people. Utilising the help of other members of the KIS GROUP, the company helps its customers during the licensing process (feasibility studies, applications, lien with authorities, etc.). As a medium-sized company, KIS Engineering and Trading Ltd. can combine the flexibility and price advantages of SMEs with the reliability and stability of large corporations.

POLYDUCT LTD.

Polyduct Ltd. was established in 1992. Its main profile is rotational plastic moulding. The company's unique technology is excellent for the standardised production of wide and heavy hollow plastic bodies in a large variety of shapes.

In its vast product range, Polyduct Ltd. seeks solutions to the growing requirements of environmental protection, water and wastewater management and the urban world. On top of being a supplier, Polyduct Ltd. is one of the experts in all related sectors. To maintain its position as market leader, the company expanded its product and mould planning and production activities. In 2013, the company established a distribution subsidiary in Romania (SC. POLYDUCT S.R.L.), then in Serbia in 2018 (POLYDUCT doo).

polyduct@polyduct.hu
+36 54 480 666 / +36 30 228 22
H-4181 Nádudvar, Kabai utca 62.

PRODUCTS & SERVICES

The company, as a Hungarian producer, is a competitive supplier for the water (unique water treatment and system of public utilities), the urbanisation (waste treatment, playgrounds, Streetfitness, furniture for public places, traffic control products) and industrial cooperation (technical development, the implementation for industrial companies) industries.

ADVANTAGES

Each piece of the final product is important to meet standards. Polyduct Ltd. is committed to the highest quality in its activities, work and products, which is also guaranteed by an ISO certification and the operating enterprise resource planning system. The company strives to find solutions before problems occur in production. It flexibly adapts to market and business environment changes. The use of its products enables settlements and villages to avoid soil pollution, facilitate selective waste management and recycling and to operate household sewage treatment systems.

ARUNDO BIOENERGY LTD.

Arundo BioEnergy is a Hungarian biotechnology company offering homogenous and genetically stable Arundo donax plantlets to be cultivated for raw material in the biomass, biogas, cellulosic bioethanol, pellet, briquette, paper and furniture industries.

The company is the sole user of the worldwide patented embryogenic cell-based micropropagation technology that allows the mass production of the high yielding, durable, virus-free perennial energy crop.

www.arundobioenergy.com
info@arundobioenergy.com
+36 20 942 4245
H-1045 Budapest, Berlini utca 47-49.

PRODUCTS & SERVICES

Arundo donax is commercialised in either bare-root form (requires acclimatisation) or as soil ball (field-ready) plantlets, depending on the destination.

The gene bank of 19 different ecotypes allows for optimised plantlet material for mild temperate, continental, Mediterranean, semi-arid, subtropical and tropical regions, adapted to a wide variety of ecological conditions.

The plantlets are accompanied by acclimatisation and plantation expertise, with cultivation and plantation management consultation on request.

ADVANTAGES

The benefit of Arundo is that it has a lifespan of 25 years, with annual harvests as early as in the first year as a perennial crop. With a yield of 50-80 dry tons/ha/year, Arundo is one of the most competitive biomass sources available on the market. Being a durable crop, it can be grown on marginal land in regions with long drought periods, potentially requiring minimal agricultural input.

Other advantages: no pollen, no allergen impacts, no G.M.O., no biohazard risks, no pathogens, free of viruses and not invasive as it has no fertile seeds.

KUUBE HUNGARY LTD.

Kuube Hungary Kft. is a Hungarian startup that designs and produces solar-powered smart street furniture. It is important for them to create products that combine innovative technology and sustainability, which is why they have chosen to work with solar energy.

All of their products are 100% Hungarian designed and developed and even the software and hardware environments are entirely self-developed from quality components. This year, they've launched a smart micro-mobility point together with two other Hungarian startups, PLATIO and Rollin.

www.kuube.hu
info@kuube.hu
+36 70 389 6028
H-1038, Budapest, Rózsadomb utca 33.

PRODUCTS & SERVICES

Kuube's flagship products are its solar-powered smartbenches. Clients can choose between 3 different sizes (Kuube PLUS, Kuube NANO, Kuube ECO). All of them are equipped with USB ports and wireless chargers for smart devices and have an unlimited free WiFi hotspot function.

Their Kuube PLUS NOTE bench has built-in speakers and two large touchscreens, where users can communicate. They are charged exclusively by solar energy and the site of installation is flexible as they are fully functioning even where the public utilities are difficult to access.

ADVANTAGES

Kuube's products are made of high quality materials: 100% aluminium, tempered glass, ash wood. Apart from sustainability, optimal heat dissipation and longevity were main objectives in the design process. They have the biggest, 8 seater smartbench on the market. All of their products are equipped with an outdoor, high-brightness digital display, the Kuube PLUS NOTE has two 7" touchscreens and built-in speakers. Their smart furniture are not just seasonal products, since thanks to the winter mode they also function in cold weather.

REFERENCES

They have installed smart furniture in many Hungarian cities and abroad as well. This year they've set up smartbenches in Thailand, Spain, Romania (EUR 150,000in total).

THERMOWATT LTD.

Thermowatt Ltd. was established in 2007 in Budapest, Hungary, with the aim of implementing, managing and operating systems based on its proprietary invention. Its ‘Method and circuit arrangement for recovering heat from wastewaters’ has been patented in Hungary, Russia and Ukraine and granted a patent in a further 35 countries by the European Patent Office (EPO). Thermostat technology was first recognised by the Spanish Aqualia Award for Innovation in 2013 and received the Water & Energy Award in 2014 at the Water-Energy Exchange (WEX Global). It also came first as Innovator in the Water for Real Estate Sector award in 2015 in Abu Dhabi at the International Water Summit.

www.thermowatt.hu
info@thermowatt.hu
+36 23 428 702
H-1023 Budapest, Árpád fejedelem útja 26-28.

PRODUCTS & SERVICES

Thermowatt technology’s primary goal is to extract wastewater from the sewer line, direct it to a heat exchanger in a mechanically filtered form and then lead it back to the sewers along with the separated solid particles. The heat energy recovered by heat exchangers is transferred into utility heating or cooling via water / water heat pumps. The system’s unique advantage is that the same heating system is applied for both cooling and heating. To operate in the most efficient and energy-saving manner, the system elements are carefully designed, optimised and harmonised. The technology has also been tested at extremely low and high external temperatures [-17°C - +37°C] and under fluctuating

quantity and quality wastewater conditions. It is suitable for water heating systems up to 63°C and as part of virtually any cooling system. The system is ideal for larger energy demand buildings (1 MW and over) where major wastewater flows are available (city centres, vicinity of sewer networks). Its compact size allows it to be built under or above the ground to provide heating and cooling energy all year round. The closed working system does not produce any smell or hazardous waste on the site and saves considerable energy thanks to its high efficiency (COP) indicators.

ADVANTAGES

The system can be used in both cooling and heating mode – even simultaneously. Thanks to the quick and easy installation, Thermowatt’s system has a significantly lower footprint compared to geothermal alternatives, and zero water consumption compared to cooling towers. The system can be very easily accessed and maintained, making city centre installation possible. The integrated control system ensures simple and easy monitoring (even remotely). The low operational costs, efficient operation and no limit regarding the size of the system makes Thermowatt’s system an excellent choice.

BDL LTD.

BDL is committed to offering personalised, systematic solutions in all aspects of the water industry. Due to BDL's diverse professional activities, it considers technical, ecological and economical aspects to find the most sustainable alternatives to support clients in optimal decision-making.

BDL has contributed to the development and protection of the aquatic environment in Hungary and in neighbouring countries.

www.bdl.hu
info@bdl.hu
+36 1 224 0670
H-1118 Budapest, Rétköz utca 5.

PRODUCTS & SERVICES

The company provides conventional civil engineering - including design and implementation - services with a clear focus on water utilities.

Professional financial and economic planning services facilitate successful investments and efficient operation (Dynamic Cost Comparison, Life-cycle Costing).

The integrated water utility asset evaluation methodology (MIAD software) enables the creation of sustainable and responsible bases for asset management and allows utility service tariffs to be optimised.

ADVANTAGES

The company stands out by providing professional financial-economic planning services to facilitate successful investments and efficient operation.

Developed by its Utility Asset Evaluation department, the Multipurpose Infrastructure Assessment Database, 'MIAD', software is a fully integrated, complex system specifically prepared for asset evaluation.

REFERENCES

Using MIAD software, BDL has so far evaluated 24,300 kilometres of the water supply network and over 22,400 kilometres of the sewer network, water utility network and technological facilities, which altogether means 1.5 million items in more than 2,000 municipalities.

toth.roland@enviprolog.com
+36 70 214 6417
H-8000 Székesfehérvár, Honvéd utca 3/A

PRODUCTS & SERVICES

Air quality engineering services

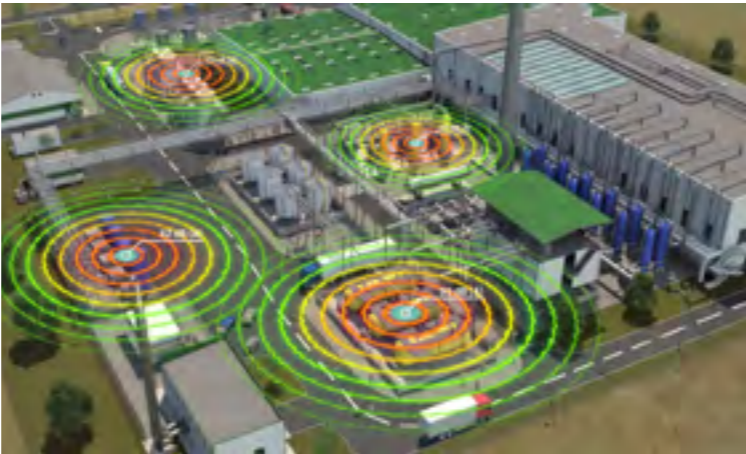

The most frequent task in air purity protection is determining the emissions from an activity. Dispersion modelling is suitable for determining the parameters of the sources to be established.

Noise reduction services

The company arranges the noise sources associated with the activity in a database and produce a 3D noise map. As a result of the noise mapping, measures necessary for noise reduction may be taken.

G.I.S. mapping

The exacting depiction of geographic information promotes an easy understanding of the results presented and the evaluation of conformity with legislative regulations.

ADVANTAGES

ENVIPROG is familiar with environmental technologies and the best available techniques. Based on its professional experiences, the company can solve air quality and noise emission issues, as well as optimise environmental expenses.

A high-quality IT background and deadline tracking serve as a basis for its management system.

The company's continuous availability guarantees prompt reactions and responses to client questions and requests.

HUNGARIAN WATER PARTNERSHIP

The Hungarian Water Partnership is a network for companies and professionals in the water and wastewater sector. The company improves its economic performance in a dynamic and growing international environment and concentrates on the complete water management process. It is integrated into the different segments of the water industry: from engineering-design to construction, and from consultation to operation and maintenance. It possesses outstanding professional and innovative knowledge, which recognised on a global scale, with more than 15 years' experience in the field of EU-funded projects and excellent relationships with various professional water-related organisations.

www.hungarianwaterpartnership.com
info@hwc.hu
+36 1 224 0670
H-1118 Budapest, Rétköz utca 5.

PRODUCTS & SERVICES

The Hungarian Water Partnership offers cost-effective and affordable water and wastewater solutions, such as drinking water purification, wastewater treatment, stormwater management, water reuse, containerised solutions, leachate treatment and air treatment, as well as consultation, financial-economic planning, financial support and complex solutions.

It supports the realisation of solutions from planning to operation, and provides partnerships, professional cooperation and networking on an international level.

ADVANTAGES

The Hungarian Water Partnership helps to connect people, allowing them to share their knowledge, experience and know-how regarding the most innovative solutions to challenges. It aims to develop, provide and promote best practices, water-related international frameworks and standards, supporting transitions to sustainable practices to prevent environment-related water crises.

ORGANICA WATER LTD.

Organica Water is a global provider of innovative solutions for the treatment and recycling of wastewater. Over the past two decades, Organica Water has developed a highly imaginative approach to wastewater treatment for urban and residential areas. Today, Organica is an international company with offices on six different continents.

It is the world leader in bringing sustainable wastewater solutions to communities worldwide, with more than 110 facilities in 16 different countries. Organica's portfolio of wastewater treatment solutions covers the full value chain, from design to facility construction (leveraging the Organica Food Chain Reactor solution) and operations management (focused on its digital services offering).

www.organicawater.com
info@organicawater.com
+36 1 455 8060
H-1094 Budapest, Tűzoltó utca 59.

PRODUCTS & SERVICES

For wastewater facilities, Organica offers core products and services to enable the construction of a complete WWTP based on the Organica Food Chain Reactor (FCR) facility, which is a type of Fixed-Film Activated Sludge system utilising a fixed-bed biofilm that grows on both natural (plant) and engineered (patented bio-fibre media) root structures, all housed in a compact, odourless, botanical garden-like facility. The result is a wastewater facility that offers a significantly reduced physical footprint, zero 'psychological' footprint and lowers operational and infrastructure costs compared to other activated sludge-based wastewater treatment solutions.

Organica's operation management offering pulls together its expertise in process design, bio-kinetic modelling and analytical sensors/instruments with digital software to help facility owners run their wastewater facility reliably and efficiently, 24/7/365.

Organica's flexible solutions cover the complete spectrum, from complete operations and maintenance to basic digital monitoring, allowing clients to start small and progress as they see the savings.

ADVANTAGES

Organica's facilities utilise active biofilms on natural (plant) and engineered root structures, all housed in a fully-enclosed, odourless facility.

The result is a solution that offers a significantly reduced physical footprint and lower operational and infrastructure costs when compared to conventional wastewater treatment solutions, all in the form of a pleasant, botanical garden-like environment that can even be located in the city centre.

PURECO LTD.

PURECO designs, builds, operates and maintains water and wastewater treatment facilities with special dedication and professionalism in the fields of drinking water purification, communal and industrial wastewater and landfill leachate treatment, stormwater management and air treatment, while respecting site environments, whether natural or urban. The company develops optimal and cost-effective, life-long solutions to keep the environment safe by focusing on added value and sustainability. PURECO is an international company with several offices in Central & Eastern Europe, and it is also present in Asia, Africa and the Middle East.

www.purecoreferences.com
info@pureco.hu
+36 1 224 0670
H-1118 Budapest, Rétköz utca 5.

PRODUCTS & SERVICES

Thus far, PURECO GROUP’s sole focus has been on water treatment and management. As in previous years, a strong need has been emerging for air pollution control. In recent years, the company’s experts have developed the PURECO VENTUS bio-antiperspirant product family. Starting development 2-3 years ago, the company tested its products on pumping stations and wastewater treatment plants it had itself constructed.

After the initial successful tests, the company completed the product range, and now there are five various biofilter unit styles using biodegradation for odorous air treatment with biomass. Units are available from the smallest 10 m3/h to the largest VENTUS that can handle and treat 100,000 m3/h airstreams. PURECO has a special unit that uses a different purification method: adsorption with activated carbon.

ADVANTAGES

Unpleasant smells are often associated with industrial activities, especially municipal wastewater collection and treatment, at wastewater treatment and sludge treatment plants, near sewerage systems, at landfills and composting plants, during food or chemical industry plant operations. Using the biodegradability of microorganisms, the VENTUS biofilter system is an environmentally friendly, sustainable and safe solution to eliminate odour problems. Believing in complex solutions, PURECO not only offers the biofilter system but several optional components, such as a gas scrubber, dust separator, air distributor (for multi-unit modules) and operating cost optimisation (container units can be individually connected).

WATERSCOPE INC.

WaterScope Inc. is a young yet dynamic company run by experts with more than ten years' water management experience. The team, always searching for innovative technology, actively implements the IoT world's results into everyday work, and encourages its partners to act in a similar fashion. WaterScope Inc. offers support and state-of-the-art solutions. The company leads national and international projects and harmonises research and development. Its projects cover a wide range of topics: water management, quality control, smart monitoring, sensor measurements and wireless data transfer.

www.waterscope.eu
waterscope@waterscope.eu
+36 30 244 8031
H-1116 Budapest, Kondorosi út 2/a

PRODUCTS & SERVICES

The Sensors2Net system offers innovative, intelligent solutions: data collection, interpretation, design and implementation. Be it tight urban applications or distant rural communities, the sensor data, collected on-site, are transferred wirelessly to any dedicated server. Users can perform AI-assisted analysis and make operational decisions regardless of time and place. The results are real-time monitoring, early error detection, water loss prevention and predictive maintenance vs preventive maintenance. All of this fits seamlessly into existing and newly implemented water management processes alike.

ADVANTAGES

The installation of the products is quick and easy, even on white spots on the map, and does not require any cabling. The composition of the products enables simultaneous handling of a large number of sensors. Among the many advantages of WaterScope's products, the low operation and maintenance costs, the high scalability and customisability and the ability to cover a large area with low power needs are just a few. The special sensors are able to access data where GSM or LTE service is unavailable or insufficient, and they provide proper bitrate for the sensor data collection on a high-security level as well as server-side data-processing with AI-assisted data analysis. The company applies its years of BIG DATA handling experience to its projects.

WATER&SOIL LTD.

Water&Soil® Ltd. is a Hungarian agricultural input material producer addressing one of the greatest limitations to global agriculture: water scarcity.

The Water Retainer is a liquid soil conditioner that retains existing humidity in the soil by reducing evaporation loss. This is effective both in rain-fed and irrigated cultivation. It can provide 10-20% higher yields or reduce irrigation water use by up to 30 – 50%.

PRODUCTS & SERVICES

Water Retainer soil conditioner.

ADVANTAGES

The product is for reducing the evaporation loss of the soil. This results in savings of up to 50% in irrigated agriculture or higher yields and longer endurance during drought periods in non-irrigated agriculture.

REFERENCES

The Water Retainer is actively traded in Hungary, Morocco, Kenya, Pakistan, India, Chile and the UK. It is widely tested by scientific institutions in 14 countries across 4 continents. The FAO has recently recognized the Water Retainer by incorporating the product into its list of recommended technologies.

PRIMARY TARGET MARKETS

Romania / Spain / Italy / Greece / Peru
